METROINFORMATOR

Technical solution description

BYSTROV ALEXEY

30 October, 2018

CONTENT

1. TASK

Develop application that represents information system for private metro company. The system provides the ability to purchase electronic ticket on the train in different directions.

User cases:

- search train chains passing through station A to station B in a given date
- schedule of trains on station;
- ticket purchase:
  - if train has empty seats;
  - before the departure not less than 10 minutes;
  - the trip will take no more than one day

Administrator cases:

- adding new trains;
- opening/closing stations;
- deleting trains;
- viewing of all registered passenger train;
- viewing all trains;
- viewing status of all stations

Additionally, to develop co-application for railway scoreboard retrieving data from main application.

2. PROJECT GOALS

- The useful, reliable, fast and automated system

- Cohesive data model

- User-friendly interface

- Separate access to different system’s part

3. ADDITIONAL FEATURES

- Search time-optimized path between stations on different branches taking into account closed transition stations
- Buying multiply tickets if begin and end stations located on different branches
- Automated schedule creation for the week ahead (can be changed)
- Automated cleaning old schedules
- Automated ticket-invalidation ticket if begin or end station are closed and before departure or arrival less than 10 minutes
- Sending SMS-messages:
    - when user was registered successfully
    - when ticket was invalidated (closed station or deleted train)
- Selenium UI – tests
- For tests used mini database in Docker
- JProfiler used for performance optimization and CPU-load control
- Continuous Integration with Jenkins

4. INSTRUMENTS AND TECHNOLOGIES

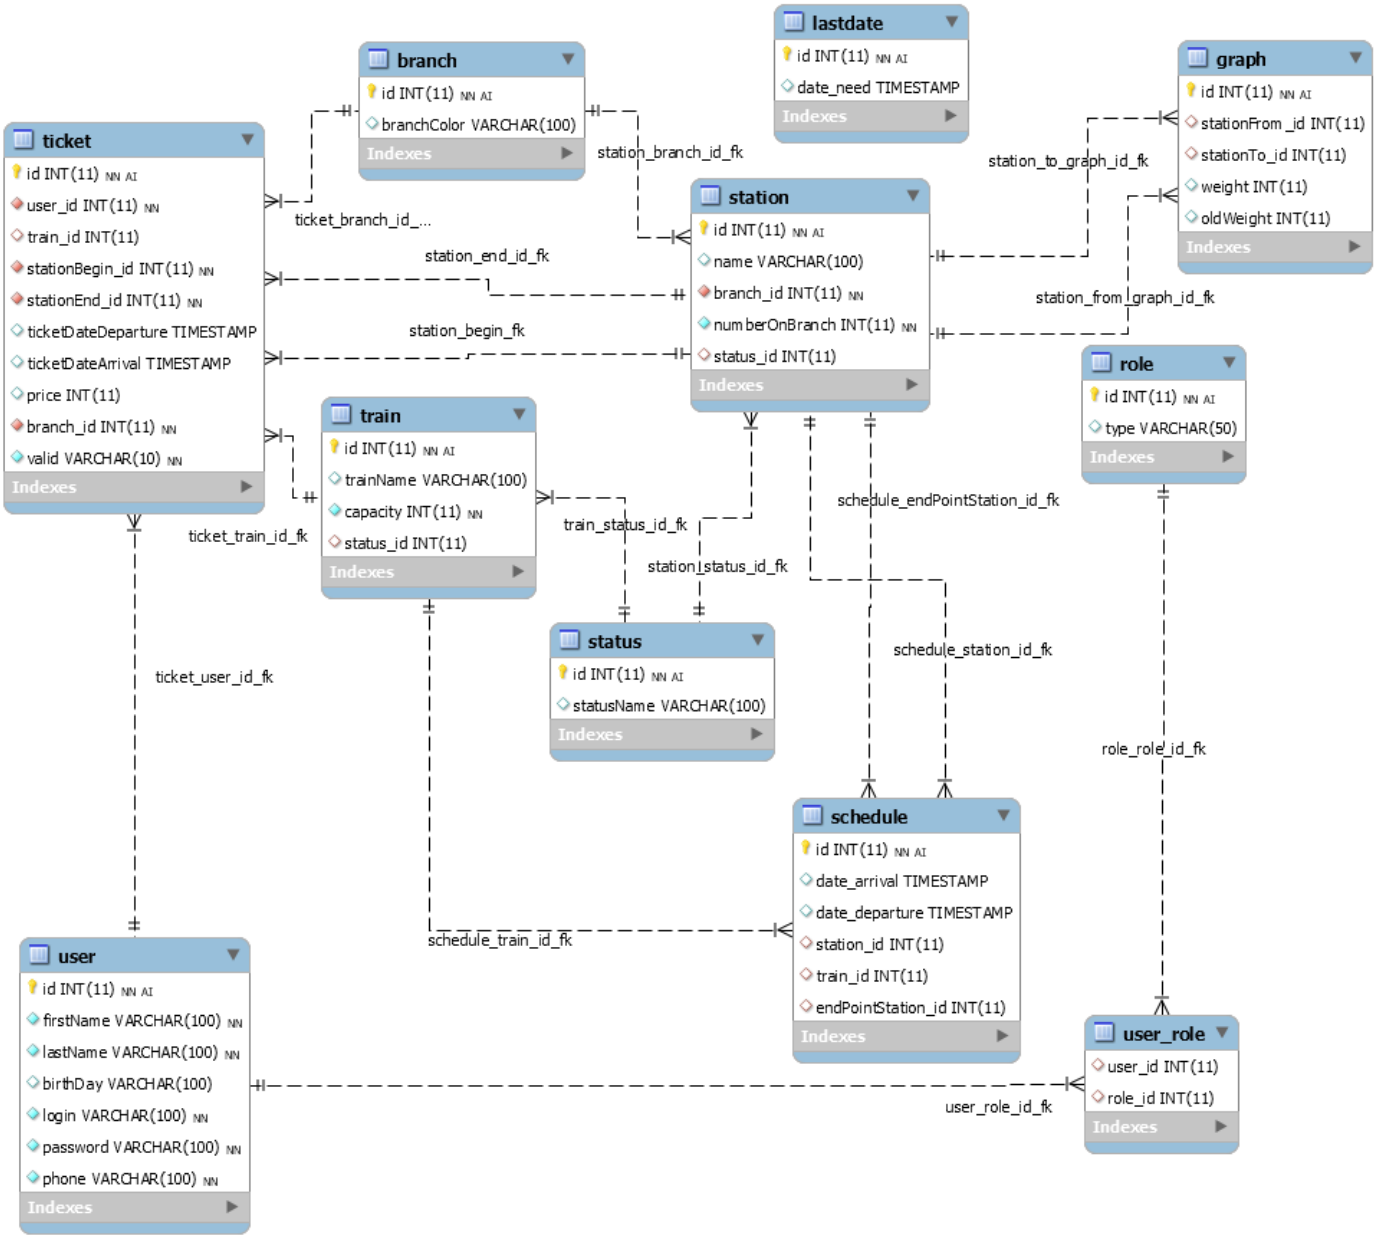
INSTRUMENTS

- IDE – Intelliji IDEA
- DB – MySQL 8.0.12
- Docker 18.06.1-ce-win73 (19507)
- Jenkins 2.146
- JProfiler 10.1.3
- MAINSMS
- Maven 3.5.4
- Tomcat 8.5.33
- Wildfly 14.0.1.Final

TECHNOLOGIES

- Ajax
- Bootstrap 4.0
- Hibernate 5.3.1.Final
- Java 8
- JavaScript
- JPA 2.0
- JQuery
- JSF 2.1.7
- JSP 2.3.1
- JUnit
- Log4j 1.2.17
- Lombok 1.16.20
- Mockito 1.10.19
- Primefaces 6.1
- RabbitMQ 3.7.8
- REST
- Selenium 2.53.1
- SonarQube 6.7.5
- Spring Framework 5.0.8
- Spring Security 5.0.6

5. DATABASE MODEL



6. SYSTEM INFRASTRUCTURE

Front-end (browser presentation level):

1) Web-page structure - HTML

2) Page-design - CSS

3) Dynamic content - JavaScript, JQuery, Ajax.

Back-end (server based level):

1) Application server - Tomcat

2) Database - MySQL

3) Server logic - Spring Framework

Client advertisement application:

1) Web-pages - JSF

2) JMS - RabbitMQ

3) Application server - WildFly

4) Server logic - EJB

5) WS - REST

7. SYSTEM ARCHITECTURE

Architecture of server-based part presented by MVC - design pattern.

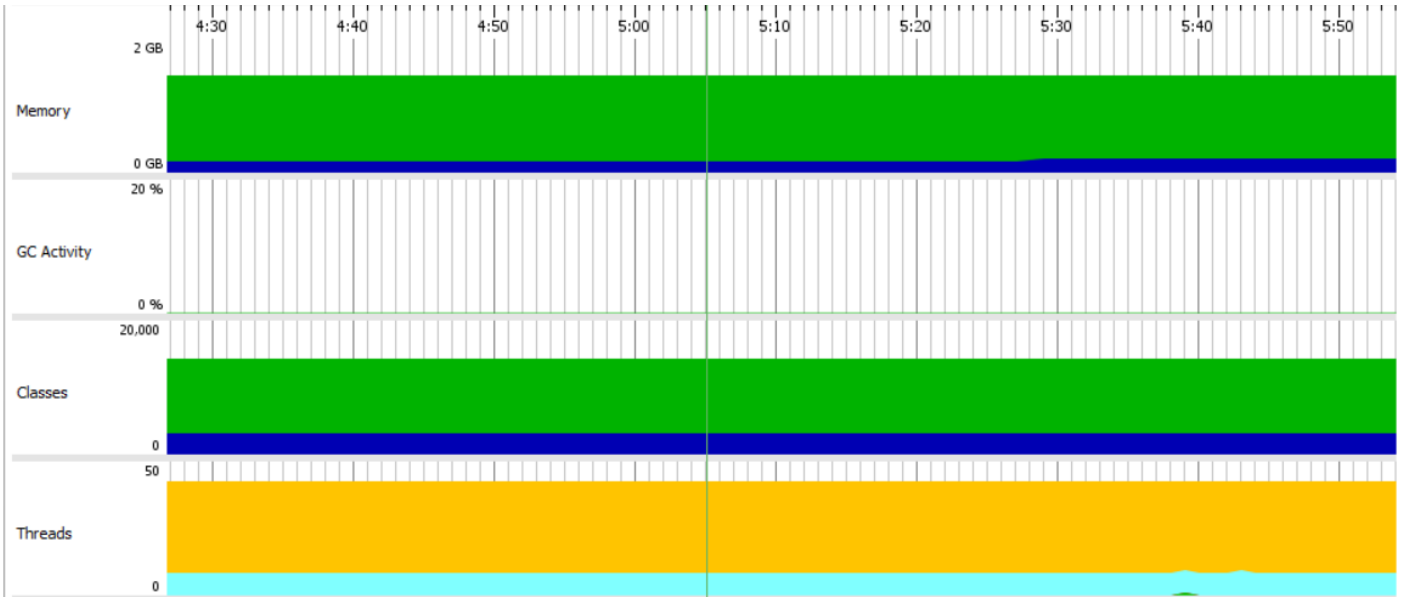
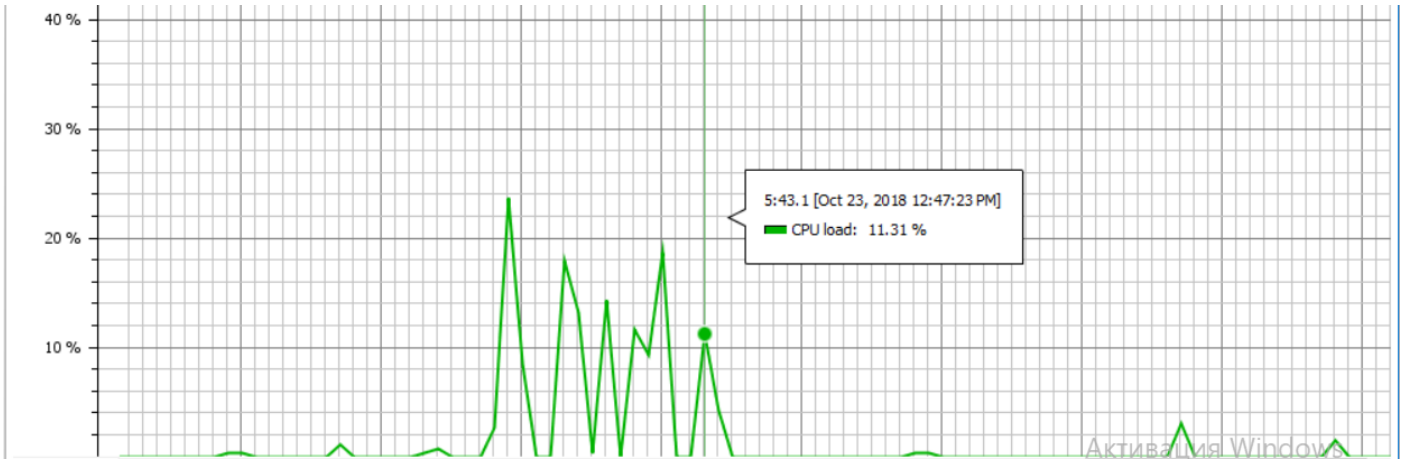
JProfiler metrics (idle):

MAIN APP

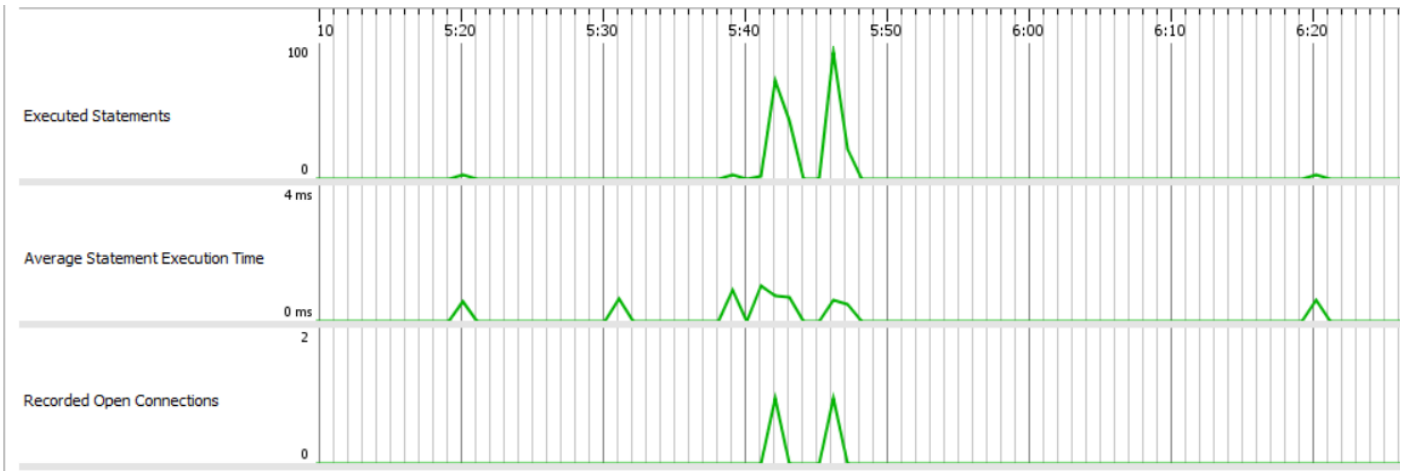
Common metrics



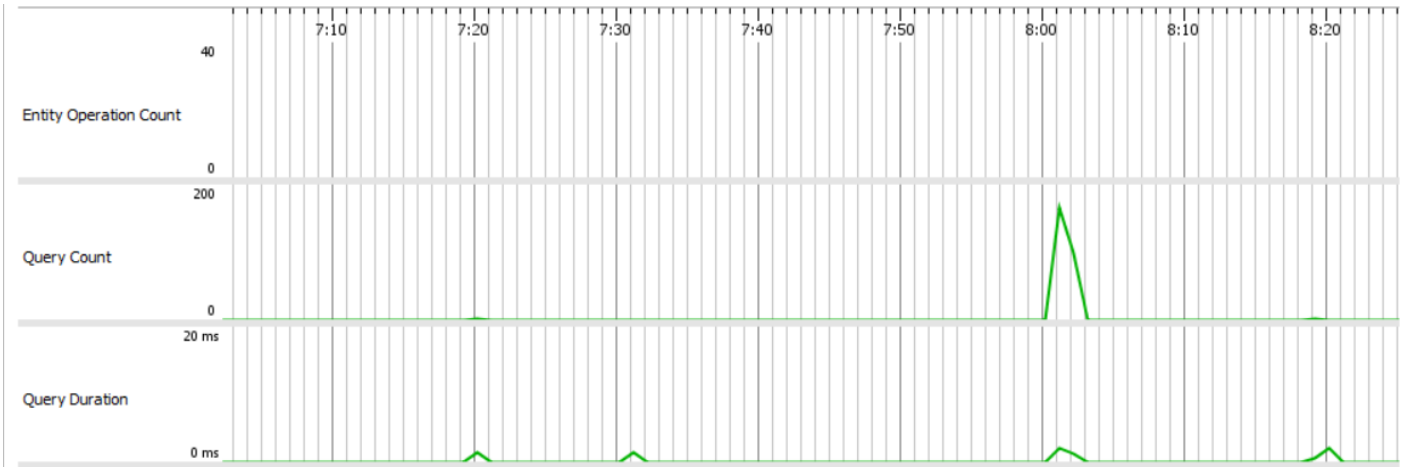
CPU Load



JDBC

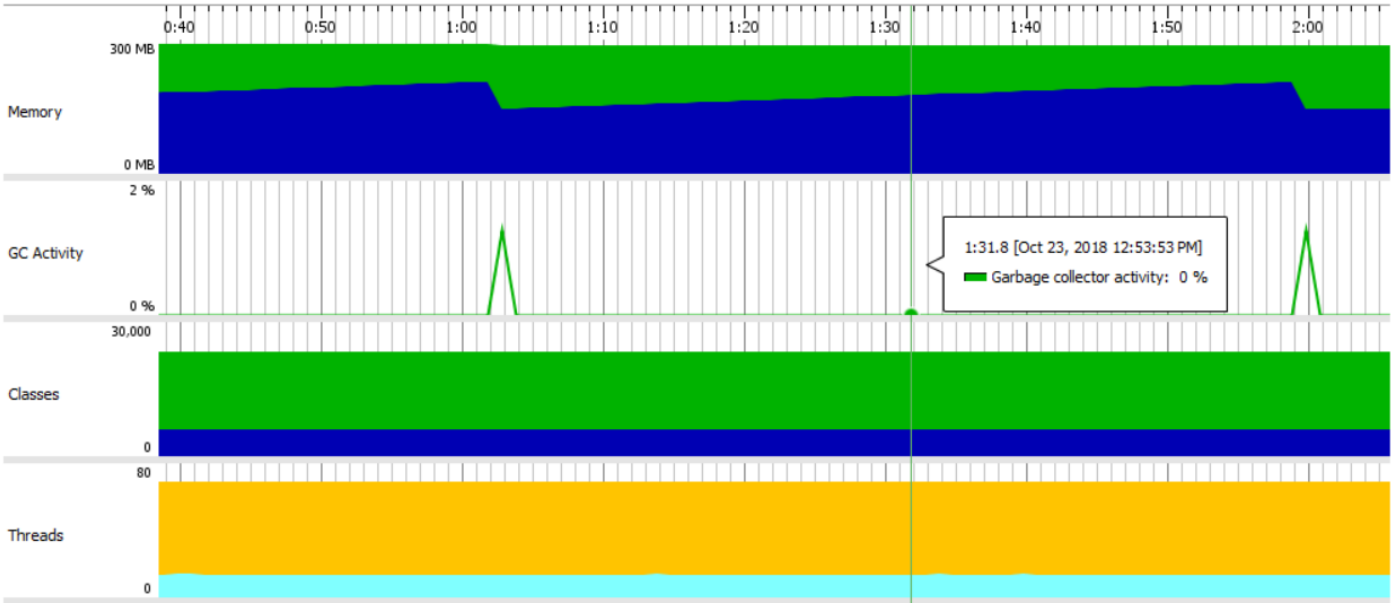


JPA/Hibernate

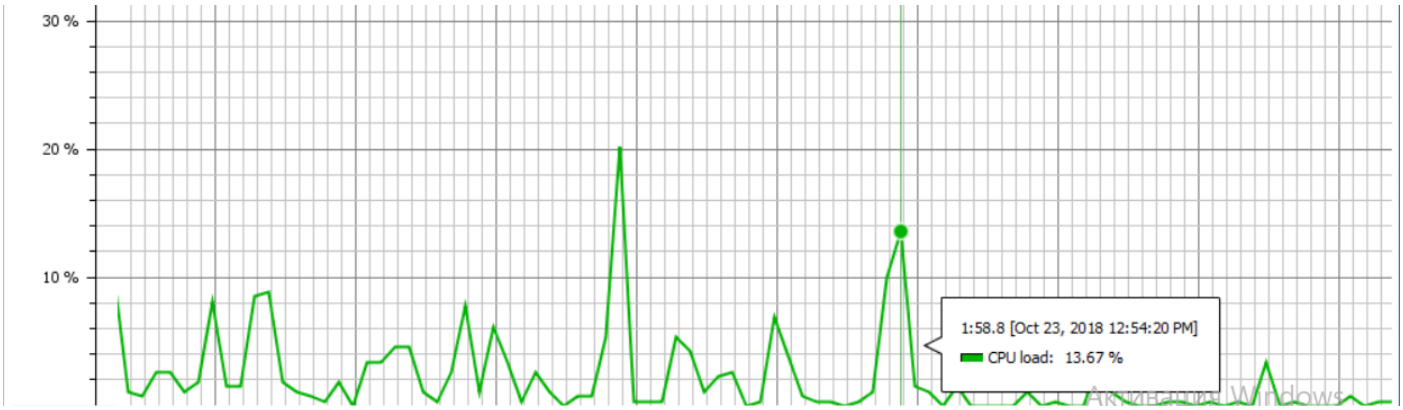


SCOREBOARD APP

Common metrics



CPU Load



11. BUILD AND DEPLOY

Database:

mysql –u root –padmin

initialization script: fullcreator.sql

NGROK:

Ngrok http 8000

RabbitMQ:

rabbitmq-server start

Start Tomcat Application Server:

%CATALINA_HOME%/bin/startup.bat

Start Wildfly Application Server:

%WILDFLY_HOME%/bin/standalone.bat

Setup test database in Docker:

docker run -p 6161:3306 --name basename -e MYSQL_ROOT_PASSWORD=admin -d mysql:latest

docker cp ./docker-entrypoint-initdb.d/test.sql basename:docker-entrypoint-initdb.d/H2Script.sql

docker exec -it basename mysql -uroot -padmin

source ./docker-entrypoint-initdb.d/H2Script.sql

For Windows - be sure, that your account has password

Start/stop test database:

docker start basename

docker stop basename

Deploy main application:

mvn tomcat7:deploy

Test main application:

JUnit tests: *mvn test*

Selenium tests: *mvn failsafe:integration-test*

Deploy scoreboard application:

mvn wildfly:deploy

JProfiler (after application deployment):

Attach -> c:/WILDFLY/jboss-modules.jar –mp c:/WILDFLY/modules org.jboss.as.standalone –Djboss.home.dir=c:/WILDFLY -> Sampling

Attach -> org.apache.catalina.startup.Bootstrap start -> Sampling

Ports:

localhost:3306 – main DB

localhost:4040 – ngrok panel

localhost:5673 – RabbitMQ

localhost:6161 – test DB in Docker

localhost:8000 – Tomcat

localhost:8080 – Wildfly

localhost:8282 – Jenkins

localhost:9000 – SonarQube

localhost:15672 – RabbitMQ Admin panel

12. FUTURE IMPROVEMENTS

- add QAuth2 authorization

- add payment system imitation

- improvement of user profiles system (trip history, editing information, etc.)

- additional application for management (branch load, ticket statistic, etc.)

- implementation of Testcontainers

- whole dockerization of system infrastructure

- refactoring code and performance improvement
